FocusUp for Canvas

Setup guide for the browser extension (Chrome, Edge, Brave and Firefox). It brings your upcoming Canvas assignments into FocusUp's Quest Log on your phone. Assignments you've already submitted are skipped.

What you downloaded

File	Use it for
`FocusUp-Canvas-Chrome.zip`	Chrome, Microsoft Edge, Brave (any Chromium browser)
`FocusUp-Canvas-Firefox.xpi`	Firefox 140 or newer

Install in Chrome, Edge or Brave

1. Right-click `FocusUp-Canvas-Chrome.zip` and choose **Extract All**.
2. Move the extracted folder somewhere permanent, for example `Documents\FocusUp-Canvas`. The browser runs the extension from this folder, so don't delete or move it later.
3. Open `chrome://extensions` (Edge: `edge://extensions`, Brave: `brave://extensions`).
4. Turn on **Developer mode**. In Chrome it's the switch at the top right; in Edge it's on the left side.
5. Click **Load unpacked** and select the extracted folder. Pick the folder that has `manifest.json` directly inside it.
6. Click the puzzle-piece icon in the toolbar and pin **FocusUp for Canvas** so it's always visible.

> **Check the ID.** The FocusUp card should show the ID `nkoidnlhkikljdedbcmjahoddmiafopo`. Sign in with Apple only works with that exact ID. If you see a different one, you have an older copy loaded: remove it and load the new folder.

Install in Firefox

For testing (quick, but temporary)

1. Save `FocusUp-Canvas-Firefox.xpi`. If Firefox says it “could not be installed because it has not been verified,” that's expected. Just make sure the file is saved.
2. Go to `about:debugging#/runtime/this-firefox`.
3. Click **Load Temporary Add-on…** and choose the .xpi file.

> Firefox removes temporary add-ons when it closes, so you'll need to load it again each time you open Firefox.

To keep it installed for good

1. Sign in at addons.mozilla.org, open the **Developer Hub**, and choose **Submit a New Add-on**.
2. Choose **On your own**. Mozilla signs the add-on without listing it publicly.
3. Upload the .xpi. When Mozilla sends back the signed file, open it in Firefox to install it permanently.

First-time setup

1. Click the FocusUp icon in the toolbar.
2. Sign in with **Sign in with Apple**, or your FocusUp email and password (the same account as the app). New accounts are created in the FocusUp app on your phone.
3. **If you used Apple:** the popup closes when the Apple window opens. Finish signing in, then click the FocusUp icon again. It should show you signed in.
4. Open your school's Canvas dashboard in a normal tab.
5. Click the FocusUp icon and choose **Enable Auto-Sync**. Allow access when the browser asks. You only do this once per Canvas site.
6. Open FocusUp on your phone. Your upcoming assignments appear in the Quest Log.

After that, it syncs by itself every time you visit Canvas in that browser, and about every 10 minutes while the browser is open.

Installing a newer version

Chrome / Edge / Brave: extract the new zip into the same folder and replace the files when asked. Then click the **reload** arrow on the FocusUp card in the extensions page.

Firefox: load the new .xpi the same way. A signed copy updates when you open the new signed file.

If something goes wrong

Apple sign-in in Firefox shows an error with a URL ending in .extensions.allizom.org/	Copy that exact URL and add it in Supabase under Authentication, then URL Configuration, then Redirect URLs. Save, and try again.
Apple sign-in in Chrome or Edge fails	Check the extension ID is `nkoidnlhkikljdedbcmjahoddmiafopo` (see the install section). If it is, the Apple secret in Supabase may have expired. Secrets last 6 months; this one runs out around March 25, 2027.

Nothing shows up in the Quest Log	Open the popup while on Canvas and make sure you're signed in and Auto-Sync is on for that site. Then fully close and reopen FocusUp on your phone.
An assignment you finished is still in the Quest Log	It was probably imported before you turned it in. Check it off in the app; checked-off quests clear themselves after 24 hours. New syncs skip anything already submitted, graded or excused.
The extension disappeared from Firefox	Temporary add-ons are removed when Firefox closes. Load it again, or get it signed (see above).
